Art Unit: 1761

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 11 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 11 is directed to a "(u)se" which is non-statutory subject matter.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 and its dependent claims are indefinite as to "if necessary" and "optionally" as it is not clear whether these steps are part of the claim.

Claims 2, 3, and 8 are indefinite as to "preferably ..." as it is unclear whether the limitation(s) following the phrase are part of the claimed invention.

Claims 4-6, 8, and 9 are indefinite as to "suitably ..." as it is unclear whether the limitation(s) following the phrase are part of the claimed invention.

Claim 9 is indefinite as to "optionally ..." as it is unclear whether the limitation following the phrase is part of the claimed invention.

Art Unit: 1761

Claims 10 and 12 are indefinite as to "substantially bovine insulin-free" as it is not clear what is encompassed by this phrase.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-10 and 12 are rejected under 35 U.S.C. 102(a) as being anticipated by Vaarala et al (WO 98/48640).

Vaarala et al teach a process for removing bovine insulin from a protein material using a resin treatment combined with a filtration treatment as is claimed (see entire document). It is notoriously well-known that the resin (Amberlite manufactured by Rohm & Haas) utilized in Example 1 (page 8) is a styrene based adsorption resin.

All of the claim limitations have been considered. None of them are seen as serving as basis for patentability.

No claim is allowed.
